

WORLD-WIDE REFERENCE LIST OF INSTALLATIONS

DISCLAIMER

This Reference List of Installations made with OPTIMUS products world-wide contains only some of the installations of which we have been informed about. The main goal of this booklet is only to give to any interested person a general view of the kind of installations, places and countries in which our products are being used.

As of the latest update made in March 2011, it contains about 4.900 references in 97 countries. These references have been listed in three ways: by installations based on Microprocessor Control Systems, by alphabetical order of countries and by types of installations.

Being OPTIMUS, S.A. only manufacturers and exporters it is up to our clients or even to other third parties, such as their clients or other installers, the task of selling, installing, testing and/or commissioning the installations. This makes very difficult, for not saying almost impossible, to keep the trace of all the places where our products are installed. We do, but, our utmost to update these references periodically, with the kind assistance of our clients

Please accept our apologies for any imprecision that might arise from the above facts and also for if you feel that any particular installation which you know and that deserves to be mentioned, is not listed herein.

Your assistance to help us keeping this list updated will be very much appreciated.

INDEX
